

Metropolitan Governance Handbook and Toolbox

Potential Climate/ Disaster Impacts addressed and Justification for this Approach

The vast majority of Mexican cities have problems with water, either due to lack of quality and quantity, or flooding and waterlogging caused by heavy rains. Both phenomena are expected to increase in the coming years due to climate change due to the increase in droughts and torrential rain.

Process of Implementation

The tool enables the identification of status quo of climate policy in metropolitan areas and helps identifying the main risks to which the region is exposed in order to integrate this information into the selection of priority projects (green infrastructure projects).

Project Title

Climate protection in urban Mexican policy (CiClim)

Project Number

2014.9046.5-001

Results and Impacts

Dissemination of the document with 500 local officials.

Proudly presented by
KC 4C30 and Globe G430

TYPE OF APPROACH

Planning approach & decision support tools

COUNTRY

Mexico

LEVEL OF INTERVENTION

subnational/regional, city

TYPE OF RISK MANAGEMENT

prevention, resistance

MAIN HAZARDS ADDRESSED

all

URBAN FUNCTION PROTECTED

N/A

SPHERE OF INTERVENTION

environment

RESOURCES REQUIRED

2 national staff 6 months. 1 design consultancy 8000 EUR

COOPERATION PARTNERS

Federal government, state and municipal officials.
