

Support Kosovo Institutions in implementation of Law on Spatial Planning and better performing spatial planning activities

Potential Climate/ Disaster Impacts addressed and Justification for this Approach

The directorates responsible for planning within the municipal administrations were supported on drafting spatial planning documents. These plans are multi sectoral strategic documents, and all spatial related strategies are elaborated from their existing situation to the spatial development framework and action plan.

Disaster risk assessment management is a separate chapter within the planning document. Natural and manmade risks and hazardous areas within the municipal territories are thoroughly described. After a careful analyses and assessment by the professional teams, prioritized measures stated in the planning documents are incorporated in the action plan, including climate change mitigation and adaptation measures. The municipal spatial planning documents are drafted for the period of 8 years. Furthermore, during the drafting process a Social Environmental Assessment Report was drafted for these documents. Its aim is to assess whether the actions planned within these documents are not having negative environmental impacts.

Process of Implementation

Throughout the entire planning process the municipal administration were put on lead whilst technically supported by the GIZ technical staff and the hired consultants. The objective was to increase municipal capacities in learning by doing. Furthermore, a comprehensive participatory process was undertaken while developing the plan, with conventional and innovative digital tools.

Project Title

Strengthening Spatial Planning and Land Management (2017-2022)

Project Number

2018.2239.4

Results and Impacts

Municipal spatial planning staff are capacitated to implement the approved spatial planning documents, where climate change mitigation and adaptation measures are significant part of the plan. Based on the municipal specifics the measures that are mostly planned comprise the following: forestation, bed river cleaning and regulation, urban forestry projects, central heating where possible, education campaigns on environment, project on improving non-motorized transport especially in urban areas etc.

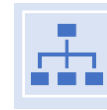

TYPE OF APPROACH

Plan & Strategy Development

COUNTRY

Kosovo

LEVEL OF INTERVENTION

city, neighbourhood

TYPE OF RISK MANAGEMENT

prevention, transformation

MAIN HAZARDS ADDRESSED

flood, landslide, earthquake

URBAN FUNCTION PROTECTED

all

SPHERE OF INTERVENTION

socio-political sphere/ governance, economy, environment

RESOURCES REQUIRED

Consulting contracts for each municipality, co-financed by the municipality

COOPERATION PARTNERS

Municipal directorate responsible for the spatial planning, all municipal administration, including mayor's office to get political backing. In the central level, the political partner was the
